6mm Ceramic Trimmer Capacitor

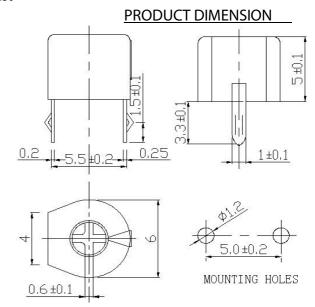

6mm series is tough constructed ceramic trimmer capacitor without a center axis and the unique doubt encased type against shock in automatic assembly. The rotor in the case is arranged to turn a quite smoothly, featuring wide range of nominal capacitance.

Features

- * Color-coded case permits easy identification
- * Sealed construction prevents the penetration of flux and dust
- * Wide range of nominal capacitance
- * +(cross-shaped) slot enables automatic adjustment

Specifications

- * Operation Temperature Range: -25°C to +85°C
- * Working Voltage: 100VDC
- * Withstanding Voltage: 220VDC
- * Insulation Resistance: 100,000 Mohm min
- * Rotation Torque: 30-100gf/cm
- * Soldering Temperature: 260°C +/-5°C

Part No.	Capacitance(pF)			Q	Temp.Coeff	Rated	Withstanding	Color
rait No.	Min	Max.		(1MHz, Cmax)	ppm/℃	Voltage	Voltage	Code

6mm Ceramic Trimmer Capacitor

Applications

These specifications are applied to Ceramic Trimmer Capacitors with the ceramic dielectric, which are used for the electric and electronic apparatus and communication equipments.

Electrical Characteristic

1. Capacitance Drift After Adjustment

Rotation shall be made for 5 cycles for 180° at a rate of 20 r/mm, a capacitance value difference would be found immediately. Once the shaft is stopped at the position of the maximum capacitance value after 24 hours later. The specification range should be within 5pF, 10pF \pm 1.5% and 30pF \pm 2%

2. Capacitance

When measured at 2° C, 0.5V to 5V,and 1MHz, the minimum capacitance is smaller than the minimum nominal capacitance and the maximum capacitance is bigger than the maximum nominal capacitance, Please refer to the minimum and maximum capacitances listed in the attached specification.

3. Temperature Characteristics

When measured the capacitance at 1MHz±10%, it reached the heat balance at each temperature changed to .+20 $^{\circ}$ C to -25 $^{\circ}$ C to +20 $^{\circ}$ C to -20 $^{\circ}$ C with adjusting to 80%~90% of the maximum capacitance, the capacitar change is based on the capacitance at + $^{\circ}$ C of 2nd stage of changing the temperature as abo

Step	1	2	3	4	5
Temperature (€)	20±2	- 25±2	20±2	85±2	20±2

$$TC = \frac{(C_2 - C_1) * 10^6}{(T_2 - T_1) * C_1}$$

TC : Temperature coefficient at $T_2(ppm_i^{\circ}C)$ C 1: Initial capacitance value at step 3(pF)

C₂: Capacitance at specified temperature $T_1: 20^{\circ}\mathbb{C}$ (step 3)

T₂: Test termperature (step 2 or 4

4. Q (Quality factor)

When measured at $2^{\circ}\mathbb{C}$, 0.5V to 5V, 1MHz and maximum capacitance ,the Q values are listed in the attached specification.

5. Insulation Resistance

When applied 100VDC between terminals for 1 minute at the maximum capacitance, the insulat resistance shall be more than $10,000M\Omega$.

6mm Ceramic Trimmer Capacitor

6. Withstanding Voltage

There is no abnormality after applied 220VDC (1ess than 5mA) for 5 seconds between the terminals.

Structure and mechanical characteristics

1. Configuration and Dimensions

Please refer to the attached drawings.

2. Strength of Terminals

When applied a power to the terminals to any direction slowly and kept at 0.5 kg for 10 seconds, the terminals shall not be loosen or broken mechanically.

3. Torque

The torque test should be done at least for l round tuning from 50gf/cm to 100gf/cm for the Normal Type, or 15gf.cm to 100gf.cm for the Reverse Type . Please note that it might cause the torque will decrease against the rotation increase.

4. Solder ability

When dipped the terminals into the soldering pot at 255° C ±5°C for 2±0.5 seconds. There is almost 75% of the total dipped surface are covered with the new solder.

(Caution: Keep the soldering conditions as above. If the soldering conditions are not suitable (excessive time, excessive temperature and etc.), it's performance will be seriously deviated.)

Color Code

Please refer to the color code in the attached specifications.
